369 ATTENDANCE

Administrator Guide

Set the rules, keep the approvals moving, and close the month's payroll.

About This Guide

This is the guide for the person who runs **369 Attendance** for the company: the one who sets office hours and holidays, decides the leave policy, keeps the approval queues clear, and closes each month's payroll.

Everything in it happens on the phone, in the **Config** tab and the screens it opens. Every button name, field label and message is quoted from the app itself, so what you read here is what you will see on the screen. Where the app's own wording names the back office, this guide says the web console instead.

The **Config** tab shows only the sections your rights allow. If a section in this guide is missing from your menu, your login does not carry that right; users and their permissions are set up on the web console, not in the app.

Your own check-ins, leave and work-from-home requests work exactly as they do for everyone else, and are described in the Employee Guide. The approval screens you share with HR are described here in brief and in full in the HR Guide.

***TIP** Every admin screen opens with a yellow guide box that lists its steps. Tap the guide's title to fold it away for this visit; it comes back the next time you open the screen.*

369 Attendance at a Glance

- **Every morning** — open **Config** and clear whatever carries a red badge: absentees, pending leave, pending work from home, draft payroll runs.
- **Once, at setup** — set **Office Hours & Working Days**, the day status ladder, **Public Holidays** and the **Leave Policy**.
- **As requests arrive** — approve or reject leave and work from home, and decide cancellations of approved leave.
- **As people work days off** — check **Compensatory Off** credits, and add one by hand when the system missed a day.
- **At month end** — create the payroll run, generate the payslips, confirm, and mark it paid; generate the month's report.

PART 1 THE CONFIG TAB

Step 1 Find the Config Tab

Along the bottom of the app sit three tabs: **Home**, **Config** and **Profile**. **Config** is the middle one, and it is only there for administrators.

It appears a moment after you sign in, once the server has confirmed what you are allowed to change. Somebody with HR rights but no administrator rights gets a smaller **HR** tab in the same place instead, holding today's attendance and the approval queues and no configuration at all.

The tab opens on a dark header reading **Config** and **Administration**, with the **Admin** menu guide beneath it: **Each row opens one admin screen, and every screen starts with a yellow guide like this one. A red badge shows how many items are waiting for you. This full menu is for admins; HR users get the simpler HR tab instead.**

What you tap	What happens
Home	Your own attendance, leave and work from home
Config	The admin menu described in this guide
Profile	Your own My details

The Config tab — the Admin menu guide and the Attendance status and Leave sections

Step 2 Read the Admin Menu

The menu is grouped into sections, each with a heading in small capitals and a card of rows. Every row carries an icon, a name and a one-line caption, and opens one screen.

Each section is shown only when your login holds the right behind it, so two administrators can see different menus.

Section	What lives in it
---------	------------------

Section	What lives in it
ATTENDANCE STATUS	Late Records, Day Status, Absent Today, Monthly Summary
LEAVE	All Leave Requests, Approved Leaves Report, Compensatory Off, Leave Balances, Leave Policy
WORK FROM HOME	All WFH Requests
CONFIGURATION	Office Hours & Working Days, Public Holidays, Auto-Approval
EMPLOYEE DETAILS	Field Settings, Salary Components, Statutory ID Types
PAYROLL	Payroll Runs, Payslips
REPORTS	Generate Report, Past Reports

If you manage attendance but not leave, the **LEAVE** section is replaced by a shorter **LEAVE BALANCES** section holding just **Compensatory Off** and **Leave Balances**.

Four rows carry a red badge when something is waiting, and the numbers are fetched again every time you come back to the tab.

Badge on	What it counts
Absent Today	People marked absent today
All Leave Requests	Leave requests still pending
All WFH Requests	Work-from-home requests still pending
Payroll Runs	Payroll runs still in draft

A row with nothing waiting carries no badge at all, rather than a grey zero.

TIP If the header reads **Nothing assigned to you** and the card says **Checking what you can administer...**, the app is still asking the server about your rights. It clears on its own a moment later.

Step 3 Move Around the Admin Screens

Every screen the menu opens works the same way. A back chevron sits top left in the dark header, with the screen's name and a caption beside it. The yellow guide comes first, then the content.

What you see	What it does
Back chevron	Returns to the menu
Arrows either side of a month or year	Page backwards and forwards; on most monthly screens the forward arrow stops at the current month
Chips under the header	Filter the list, such as Pending or All
Pull down on a list	Refreshes it from the server
Retry under a red message	Tries again after the server could not be reached

These screens cover the tab bar while they are open. Use the back chevron, or the phone's back button, to return to **Config**.

PART 2 ATTENDANCE STATUS

Step 4 Look Through the Late Records

Tap **Late Records (Every late check-in)**. The header shows a month with an arrow either side.

Each row is one late check-in: the person's name, the date, the time in and the time out (or **still in**), and an amber chip with how many minutes late they were. A line above the list totals the month, for example **3 late check-ins • 0h 45m total**.

An empty month says **Nobody was late**, and suggests checking that late tracking is on for the scope in Office Hours.

What you see	What it means
The minutes chip	How late, counted from office start
still in	They have not checked out yet
The total line	Every late check-in in the month, and the late time added up

IMPORTANT *Being late costs nothing. The only pay cut on this side of the app is a **Half Day**, set by the day status ladder in PART 7.*

Step 5 See How Each Day Was Graded

Tap **Day Status (How each day was graded)** and pick a month.

A row of tiles counts how many days got each label. Tap a tile to show only those days, and tap it again, or **Show all**, to clear the filter.

Each row is one employee on one day, with a coloured label chip. Small chips add **WFH** or **On leave** where they apply, and **auto-stamped** marks a row the server wrote by itself. A red figure beneath the label is that day's deduction.

Label	What it means
Present	In on time, or arrived after the late window closed
Late	In after office start plus grace; recorded, never charged
Half Day	Arrived after Half day after , or worked less than the Half day below ratio ; half a day's pay is cut
Leave	Covered by approved leave
Absent	Never checked in on a working day
Day Off	A weekly off or holiday that was worked; never deducted, and earns comp off

IMPORTANT Rows appear as people check in. Absent rows are stamped automatically only once the office passes **Late window ends**, and that time ships switched off. Until you set it in Office Hours, nobody is ever marked Absent and this screen can stay empty.

Step 6 Check Who Is Absent Today

Tap **Absent Today (Expected in, never checked in)**. The header shows today's date; there is no month picker, and pulling down refreshes the list.

A line reads, for example, **2 people have not checked in.**, and each row names one person with their **Absent** label. People on approved leave or an approved work-from-home day are never listed here. An empty list says **Nobody is absent today.**

What you see	What to do
A name on the list	Check All Leave Requests or All WFH Requests for a request still waiting
An empty list early in the day	Normal — absentees are only marked once the late window ends

TIP This list is built from the same automatic stamping as Day Status. With **Late window ends** left at 00:00 it stays empty however many people are missing.

Step 7 Generate the Monthly Summary

Tap **Monthly Summary (Late days per employee)**. This screen builds a ranking rather than showing a list.

Choose the **Month**, type the **Year**, and optionally pick a **Department** (the default is **All departments**). Tap **Generate**.

The result ranks everyone by late days, each row showing their department, the number of days in the form **3d**, and the total late time. Two chips at the top count the employees and the late days. Tap **Change month** to go back to the picker.

Field	What it controls
Month	The month to count
Year	Four digits; anything else gives Give a four-digit year.
Department	One department, or All departments

An empty result reads **No chargeable late days**. Arrivals after **Late window ends**, and any check-in that is not the day's first, are deliberately left out of the count.

IMPORTANT *Generating replaces the previous summary for everyone, including the copy on the web console. Two people generating at the same time overwrite each other.*

Monthly Summary — Month, Year, Department and the Generate button

PART 3 LEAVE REQUESTS

Step 8 Work the Leave Queue

Tap **All Leave Requests (Approve or reject)**. It opens on **Pending** — the requests waiting for a decision — with a count such as **2 requests** above the cards.

Each card shows who asked, the leave type and length (for example **Casual • 2 days** or **Comp Off • half day**), the dates, and a status chip. **Cancel asked** means an approved leave the employee now wants to cancel, and **auto** means the server approved it without anyone looking.

Chip	What it shows
Pending	Waiting for a decision
Cancellation	Approved leave the employee has asked to cancel
All	Everything, whatever its state
Approved	Granted
Rejected	Turned down

The list reloads every time you come back to it, so a decision you have just made shows straight away. An empty **Pending** list says **Nothing waiting**.

Step 9 Approve or Reject a Leave Request

Tap a card. The request opens with the leave type and status, then **Dates**, **Days**, **Paid / unpaid**, and **Submitted**. A comp-off request also shows **Earned on** and **Comp-off balance**, which turns red if the balance is smaller than the request. Where the request costs money, **Deduction** appears in red. The employee's reason sits beneath under **REASON**.

Paid / unpaid is the figure to read first: it shows how many of the days the policy will pay and how many will not.

What you tap	What happens
Approve	Asks Approve this request? — the person will be marked on leave, and those days leave the attendance grading. Confirm with Approve

What you tap	What happens
Reject	Asks Reject this request? and for a Reason for rejection . The reason is required, and the employee sees it

You will see **Request approved.** or **Request rejected.** and be returned to the queue.

Only a pending request can be decided. A request already decided shows, for example, **Already rejected — only a pending request can be decided.** If another manager got there first, the server's refusal is shown to you as it stands.

The screenshot shows a mobile application interface for managing leave requests. At the top, the status is 'E2E Employee' with a 'Leave request' subtitle. Below this is a yellow box titled 'How to decide this request' containing four numbered instructions. A 'Cancel' button is visible. The main form displays the following details: 'Dates' as '29 Sep 2020 - 30 Sep 2020', 'Days' as '2', 'Paid / unpaid' as '1 / 1', and 'Submitted' as '27 Sep, 14:36'. A 'Reason' field contains the text 'E2E LOP test'. At the bottom, there are two buttons: 'Reject' (red) and 'Approve' (green).

A pending leave request — Dates, Days, Paid / unpaid, the reason, and Reject and Approve

Step 10 Decide a Cancellation, or Cancel Approved Leave Yourself

An approved leave the employee wants to cancel shows an orange **CANCELLATION REQUESTED** box with their reason and when they asked. Two buttons replace Approve and Reject.

What you tap	What happens
Approve cancellation	Asks Approve the cancellation? The leave is cancelled and its days go back to the balance. You see Leave cancelled.
Keep leave	Asks Keep this leave? and for Why it stays. The leave stays approved and the employee sees your reason. You see Cancellation declined; leave kept.

An approved leave with no cancellation request shows a single **Cancel this leave** button instead. It asks **Cancel this approved leave?**, and **Cancel leave** confirms it; **Back** leaves it alone.

IMPORTANT Cancelling approved leave is refused once that month's payroll is confirmed or paid. A confirmed run can be put **Back to draft** first; a paid run cannot.

Step 11 Read the Approved Leaves Report

Tap **Approved Leaves Report (What was granted)**. The screen, titled **Approved Leaves**, shows one month at a time.

Three tiles total the month: **Days**, **Paid** and **Unpaid**. Each row below gives the employee, the leave type and dates, and the number of days ($\frac{1}{2}$ for a half day). An amber chip such as **1 unpaid** means some of those days were not covered by the paid allowance.

A leave that runs across the end of a month appears in both months. Requests still waiting are not here — they live under **All Leave Requests**.

leave

PART 4 COMPENSATORY OFF AND LEAVE BALANCES

Step 12 Look Through the Comp-Off Credits

Tap **Compensatory Off (Credits for days off worked)**.

A credit is earned when someone taps **I'm working today** on a weekly off or a public holiday, then checks in and out. A full day earns 1 and a short shift $\frac{1}{2}$; the credit is sized when they check out.

The chips under the header filter the list. It opens on **Available**, with a line such as **1 day still unspent across 1 credit**.

Chip	What it shows
Available	Earned and not yet spent
Declared	They said they were working, but have not checked out yet
Used	Fully taken by approved comp-off leave
Expired	Lapsed before it was used
Cancelled	Withdrawn by an administrator
All	Every credit

Each row shows the date worked, the person, the source and what is left, in the form **Weekly off · 1 of 1 left · manual**. **manual** marks a credit added by hand, and an available credit with an expiry adds **until** and the date.

Step 13 Add a Credit by Hand

Use this for a day off the system did not catch — a check-in that never happened on the phone, for example. Tap **Add a credit** at the foot of the list.

Field	What it controls
Employee	Who worked the day. Leaving it empty gives Pick an employee .
Day worked	The day off they worked; it cannot be in the future
Credit	Full day (1) or Half day (0.5)
Source	Weekly off or Public holiday
Note (optional)	Anything worth recording

Tap **Add credit**. You will see **Credit added**.

IMPORTANT One credit per employee per day. A credit added by hand is never resized or withdrawn by later check-ins, so check the figure before you save it.

Step 14 Grant, Cancel or Restore a Credit

Tap a credit to open **Comp-off credit**. It shows the date and a status chip, then **Employee**, **Source**, **Credited**, **Used**, **Left**, **Expires** and **Created**, plus **Lapsed**, **Holiday**, **Hours worked** and **Note** where they apply. If a leave has spent any of it, a **Used by** card lists which.

There is no edit. The used figure comes from the employee's leave requests, not from this screen. What you can do depends on the state.

What you tap	When it is offered	What happens
Grant as earned	Declared	Makes the credit Available when the check-out never came. You see Credit granted .
Cancel credit	Anything not cancelled or used	Asks Cancel this credit? The unspent part stops counting towards the balance. You see Credit cancelled .
Restore	Cancelled or Expired	Brings the credit back. You see Credit restored .

A credit whose expiry date has passed shows **Its expiry date has passed**. Restoring gives it a **fresh expiry window from today**.

TIP *If any of the credit is already used by a leave, the server refuses to cancel it until that*

leave is cancelled or rejected.

Comp-off credit
EZE HR Manager

How to manage this credit

- The system shows how many days credited, used and to left, and when it expires.
- When an earned credit is requested to left, the system shows the credit and how many.
- Cancel credit stops the requested part counting towards the balance.
- When a trip is cancelled or rejected, credit back.
- There is no self-used days come from the employee's leave requests.

Cancel credit

Cancel this credit?

The requested part stops counting towards the employee's comp-off balance. If any of it is already used by a leave, the system will refuse said that leave is cancelled or rejected.

Cancel Cancel credit

The Cancel this credit? confirmation

Step 15 Read the Leave Balances

Tap **Leave Balances (Paid and comp off, per employee)** and pick a year with the arrows.

Each employee has a card with their department and two ledgers side by side. They never mix: a comp-off leave is paid out of the comp-off balance, never out of the paid-leave quota.

Ledger	Its three figures
Paid leave	Allowed, Taken and Left , from the Leave Policy quota
Comp off	Earned, Used and Left

Tap a card to open **Compensatory Off** for just that employee, with their name in the header. **Add a credit** from there starts with them already chosen.

PART 5 LEAVE POLICY

Step 16 Set Paid and Unpaid Leave

Tap **Leave Policy (Paid days, comp off)**. There is one policy for the company, and the header shows the company's name.

If no policy has been saved yet, an amber note warns: **No leave policy is saved yet, so every leave is paid as UNPAID and deducted. These are the suggested defaults. Check them and tap Save to create the policy.**

Field	What it controls
Paid leave	The master switch. Off means every leave day is unpaid, whatever the quota below says.
Paid days per year	The yearly paid allowance
Accrual per month	How much of it is earned each month
Deduct unpaid leave	Charge unpaid days against the monthly wage. Off records them without any deduction.

A request is paid only while both the yearly and the monthly allowance have room; the rest of it is unpaid. The balance strip on the employee's Leave screen reads from these two figures.

If the monthly figure can never add up to the yearly one, the app stops you with a message such as **At 1/month nobody reaches 15 days in a year.**

IMPORTANT Paid leave does not carry forward. It resets each year, and there is deliberately

no carry-forward switch for it.

[IMAGE 18 — not captured yet]
Leave Policy — the Paid leave and Unpaid leave cards

Step 17 Set Compensatory Off

The **Compensatory off** switch decides whether working a weekly off or a public holiday earns a day back. A full day worked earns 1, a short day 0.5.

With it on, three more controls appear.

Field	What it controls
Expires after (days, 0 = never)	Days from the date worked until an unused credit lapses
Carry forward	Let unused comp offs roll into next year, up to the cap below.
Maximum comp offs carried	The cap, shown when Carry forward is on

Every number here must be 0 or more; the expiry field says so with **Days, 0 or more (0 never expires)**.

[IMAGE 19 — not captured yet]
The Compensatory off card with expiry, Carry forward and the cap

Step 18 Email HR When Leave Is Submitted

The **Notifications** card holds one switch, **Email HR on submission**. With it on, an email goes to the addresses you list the moment anyone submits a leave request. It needs an outgoing mail server set up on the web console.

Type the addresses into **Recipients (comma-separated)**, for example two addresses separated by a comma.

Tap **Preview email** to see exactly what HR will receive. The popup, **Email preview (sample)**, shows a sample request on white paper with its subject, the request's details and a **Review and approve** button, and says how many people it goes to. Tap **Close** when you are done.

TIP *The preview uses the recipients already saved. If you have just changed them, tap **Save***

first and preview afterwards.

[IMAGE 20 — not captured yet]

The Email preview (sample) popup over the Notifications card

Step 19 Save the Policy

Tap **Save**. You will see **Leave policy updated.** (or **Leave policy created.** the first time) and be returned to the menu. **Cancel** leaves without saving.

IMPORTANT Policy changes apply to requests decided from now on. Leave already approved keeps the paid and unpaid split it was given.

PART 6 WORK FROM HOME REQUESTS

Step 20 Work the WFH Queue

Tap **All WFH Requests (Approve or reject)**. Like the leave queue it opens on **Pending**, and each card shows who asked, **Work from home**, the date and a status chip, with **auto** where the server approved it.

Chip	What it shows
Pending	Waiting for a decision
All	Everything
Approved	Granted, day not yet worked
Done	Checked in and out on the day
Rejected	Turned down

A request can also show **Checked in**, **Cancelled** or **Expired** under **All**.

Step 21 Decide a WFH Request

Tap a card. The request shows **Date**, **Submitted** and the **REASON**, and, once the day has been worked, **Worked** with the check-in time and hours.

What you tap	What happens
Approve	Asks Approve this request? — the person will be able to check in from home on that date
Reject	Asks Reject this request? and for a Reason for rejection , which is required

On an approved day the employee checks in as usual, and the day is recorded as work from home.

A pending work-from-home request with Reject and Approve

The Reject this request? prompt with its reason box

PART 7 OFFICE HOURS, HOLIDAYS AND AUTO-APPROVAL

Step 22 Read the Rule Cards

Tap **Office Hours & Working Days (Grace, ladder, working days)**. The screen, titled **Office hours**, lists one card per set of rules.

The **Company-wide** card applies to everyone. A department card overrides it for the people in that department — **A department row takes precedence over the company-wide one for its own people.**

Each card shows the office hours, the grace minutes and the paid hours, for example **08:00 – 17:00, 16 min grace** and **9 h paid**.

What you see	What it means
Company-wide	The rules everyone falls back to
A department name	Rules for that department only
Tracking off	Late tracking is switched off for that card
View only	Your role can read these rules but not change them

IMPORTANT You cannot add a new set of rules in the app — there is no Add button. A department's own rules are created on the web console; here you open and change the ones that exist.

Step 23 Set Late Tracking and the Scope

Tap a card to open its rules. The form is long and runs in sections, top to bottom.

Field	What it controls
Late tracking	The master switch. Off, people can still check in, but nobody is marked late and no late figures are kept

Field	What it controls
Require late reason	Asks for a reason when a late check-in is entered or edited on the web console. App check-ins are never blocked
Company	The company these rules belong to; required
Department	A department, or Company-wide (no department)
Office timezone	The office clock; empty means Each employee's own

Every check-in is converted to the office timezone before it is compared with office start, so where the server sits does not matter.

TIP Switching late tracking off hides the grace settings and shows a note. When you switch it back on, use **Recompute last 3 months** to restore the figures it stopped keeping.

Step 24 Set Office Hours and Grace

Field	What it controls
Grace minutes	How many minutes after office start someone can still arrive on time
Office start	Typed as HH:MM, for example 09:30

Field	What it controls
Office end	Must be after office start
Daily paid hours	Filled in from the office hours, and meant to be typed over

Start 09:30 with 15 grace minutes means anyone in by 09:45 is on time. **Daily paid hours** fills itself in when you change the hours: 09:30–18:30 spans 9 hours, but only 8 are paid if lunch is unpaid, so type 8.

IMPORTANT Late minutes are counted from office start, not from the end of grace. Start 09:30, grace 15: arriving at 09:50 shows 20 minutes late, not 5.

[IMAGE 26 — not captured yet]
The Late settings and Office hours sections

Step 25 Set the Day Status Ladder

Three rules decide each day's label. Each one ships switched off — 00:00, or 0 for the ratio — and with all three off nobody is ever marked **Half Day** or automatically **Absent**, and a late arrival stays **Late** however late they come.

Field	What it controls
Late window ends	When the Late period ends. Check in after this and the day shows Present , with the real arrival time in brackets. No check-in at all by this time on a working day means Absent , stamped automatically
Half day after	Check in after this time and the day becomes a Half Day
Half day below ratio	A fraction of the daily paid hours between 0 and 1; 0.5 means half. Check out having worked less than this share and the day becomes a Half Day

Half day after is checked first. If it is earlier than **Late window ends**, anyone arriving between the two is marked **Half Day**, not **Late**.

Tap **How a day gets its label** to unfold the full ladder, and the money that goes with each rung.

What happened	Label	What it costs
In by office start plus grace	Present	Nothing

What happened	Label	What it costs
In after that, before the late window ends	Late	Nothing — recorded, never charged
In after the late window ends	Present	Nothing; the arrival time is shown in brackets
In after Half day after, or worked less than the ratio	Half Day	Half a day's pay
Never checked in on a working day	Absent	The day is simply not earned

A further switch at the foot of this section lets a linked work-tracking app create the check-in when someone starts their workday there. It does nothing unless that link is installed on the server.

IMPORTANT Until **Late window ends** is set, **absentees are never stamped: Day Status and Absent Today** stay empty for people who did not come in.

[IMAGE 27 — not captured yet]

The Day status ladder section with Late window ends, Half day after and Half day below ratio

Step 26 Tick the Working Days and Save

Working days is a row of seven letters, Monday to Sunday. Green days are working days. Unticked days are days off: nobody is marked **Absent** on them, and they are left out of the working-day count that the monthly wage is divided by. At least one day must be ticked.

Tap **Save**. The app checks every field first and tells you what to fix.

If you see this	What is wrong
Use HH:MM, e.g. 09:30.	A time is not in hours and minutes
The office cannot end before it starts.	Office end is before office start
Outside office hours, so it would never apply.	A ladder time falls outside the office day
A fraction between 0 and 1 —	The ratio was typed as a percentage

If you see this	What is wrong
0.5 is half a day. 0 switches it off.	
Pick at least one working day — zero would break every daily rate.	No working day is ticked

A good save shows **Attendance rules updated**. Saving a rule change re-grades the last 3 months of attendance, so old records follow the new rules.

Recompute last 3 months does the same re-grading on demand. It asks **Recompute 3 months?** and confirms with **Late and leave figures recomputed for the last 3 months**. You rarely need it — mostly after switching late tracking back on.

[IMAGE 28 — not captured yet]

Working days, the Save button and Recompute last 3 months

Step 27 Look Through the Public Holidays

Tap **Public Holidays (Excluded from working days)** and pick a year with the arrows.

Each row shows the date, the holiday's name, the weekday and the company. **Not counted** means the holiday is recorded but does not change payroll.

A holiday is always paid and nobody is marked **Absent** on it. That works because counted holidays leave the working-day count the monthly wage is divided by, so every holiday you add raises everybody's daily rate for that month.

Public Holidays — the year arrows, one holiday and the Add a holiday button

Step 28 Add, Edit or Remove a Holiday

Tap **Add a holiday**, or tap a holiday to edit it.

Field	What it controls
Holiday name	Required — Give the holiday a name.
Date	The day itself, chosen from a calendar
Company	Which company it applies to; usually filled in for you
Counts as a non-working day	On, it leaves the working-day count and raises the daily rate for that month. Off records the date without touching payroll

Tap **Add holiday** or **Save changes**. You will see **Holiday added.** or **Holiday updated.**

Remove holiday asks **Remove this holiday?** and warns that this changes payroll: the day goes back into the working-day count, which lowers everyone's daily rate for that month. Tap **Remove** to confirm; you will see **Holiday removed.**

Add holiday with the Date calendar open

Step 29 Set Auto-Approval

Tap **Auto-Approval (Leave and WFH, one policy)**. One screen covers both, but the two switches are independent.

Field	What it controls
Auto-approve leave	Approve a pending leave request automatically once it has waited this long
Auto-approve WFH	The same, for work-from-home requests
Wait	How long a request may wait, shown when its switch is on
Unit	Minutes, Hours or Days

With either switch on, an amber note warns that requests left undecided for the delay are approved by the server without anyone looking at them. Tap **Save**; you will see **Auto-approval updated**.

IMPORTANT A wait of 0 switches auto-approval off, whatever the switch says. Save one that way and the app tells you so, for example **Saved, but a wait of zero leaves leave auto-approval switched off**.

Auto-Approval — the Leave and Work from home switches, with Save and Cancel

PART 8 EMPLOYEE DETAILS

Step 30 Choose What Employee Details Are Kept

Tap **Field Settings (What My Details shows)**. **Everyone (defaults)** decides which employee details are recorded for all staff. An **Exception** row applies to one employee and replaces the defaults for them — it is not merged with them. Each row counts how many fields are on, for example **12 of 21 shown**.

Tap a row. The form has five sections — **Salary, Statutory, Bank, Personal** and **Employment** — each with a master switch such as **Show the personal section**. With a section on, switch the individual fields underneath.

Section	Fields inside it
Salary	Salary effective from, Annual CTC, Salary payment mode
Statutory	Income tax regime, Professional tax state
Bank	IFSC code, Branch, Account category
Personal	Blood group, Father's name, Mother's name, Emergency contact relationship, Second emergency contact
Employment	Confirmation date, Notice period, Previous employment

Tap **Save**; you will see **Field settings updated**.

IMPORTANT In the app, an employee's **My details** shows only personal details, qualifications and previous employment. Salary, bank and statutory details never appear there whatever these switches say; those switches govern the web console.

TIP Rows are not created in the app. If the list says **Nothing configured**, or you need a new exception for one person, set it up on the web console first.

Step 31 Build the Salary Components

Tap **Salary Components (Earnings and deductions)**. Earnings add up to the gross; deductions come off it to give the net.

Each row shows the component's name, its code and how it is worked out — for example **BASIC** • **Fixed amount** — with an **Earning** or **Deduction** chip and the amount or percentage.

IMPORTANT An employee's earnings must add up to their Monthly Wage. If they do not, their payslip is flagged **Mismatch** and the payroll run cannot be confirmed.

[IMAGE 33 — not captured yet]

Salary Components — earning and deduction rows and the Add a component button

Step 32 Add or Change a Component

Tap **Add a component**, or tap a row to edit it.

Field	What it controls
Name	Required — Give the component a name.
Code	A short code in capitals, such as BASIC or HRA
Type	Earning or Deduction

Field	What it controls
Computation	Fixed amount, Percentage of another component or Percentage of gross
Default amount	For a fixed amount
Percentage	Between 0 and 100, for either percentage
Percentage of	The component it is a percentage of
Company	Required
Sequence	The order components are listed in on the payslip

Only a deduction can be a percentage of gross; an earning set that way gives **Only a deduction can be a percentage of gross**.

Tap **Add component** or **Save changes**. **Remove component** asks **Remove this component?**: any employee whose pay structure uses it loses that line, but payslips already generated are not changed.

[IMAGE 34 — not captured yet]

Add component — Name, Code, Type, Computation and amount

Step 33 Set the Statutory ID Types

Tap **Statutory ID Types (PAN, Aadhaar, UAN)**. Each row is one kind of identity number, with its code (or **No code**), **validated** when it carries a pattern, and **Required** and **Confidential** chips.

Tap **Add an identifier type**, or tap a row.

Field	What it controls
Name	Required
Code	A short code in capitals
Company	Required
Sequence	The order they are listed in
Validation pattern	A pattern the value must match; empty accepts anything
Message when it fails	What the employee is told when the value does not match
Required	Every employee must have this identifier on file

Field	What it controls
Confidential	Kept off screens that are not the employee's own; on by default

A broken pattern is caught before saving with **That is not a valid regular expression**. Tap **Add identifier** or **Save changes**. **Remove identifier** asks **Remove this identifier type?**: employees who already hold one keep it, but nobody can be asked for it again.

TIP Statutory numbers never show on an employee's **My details** screen in the app.

Statutory ID Types — rows with their Required and Confidential chips

PART 9 PAYROLL AND REPORTS

Step 34 Create a Payroll Run

Tap **Payroll Runs** (**Generate, confirm, mark paid**). There is one run per company per month. Each row shows the month, the run's reference and employee count, a **Draft, Confirmed** or **Paid** chip, and the total net.

Tap **New payroll run**. Pick the **Month**, type the **Year** and choose the **Company**, then tap **Create**. The period and reference are set by the server from the month and year.

You will see **Payroll run created. Generate the payslips next**. and the new run opens. A month that already has a run for that company is refused with, for example, **A run already exists for September 2026**.

Step 35 Generate, Confirm and Pay

The run shows its company and state, then **Period**, **Pay date**, **Employees**, **Gross earnings**, **Deductions** and **Net pay**, and a **Payslips** row with the count. Which buttons appear depends on the state.

What you tap	When it is offered	What happens
Generate payslips	Draft , no payslips yet	Builds one payslip per employee from attendance and salary
Generate again	Draft	Recalculates every payslip; anyone who has left the company loses theirs
Confirm run	Draft with payslips	Locks the payslips to these figures. You see Run confirmed .
Back to draft	Confirmed	Reopens the run so the payslips can be regenerated
Mark paid	Confirmed	Marks the money as gone out. You see Run marked paid .

Every button asks you to confirm first.

If any payslip's earnings disagree with that employee's Monthly Wage, an amber note lists each one with both figures, and the run cannot be confirmed until they match. Fix the salary components and generate again.

IMPORTANT *Mark paid cannot be undone. A paid run can never be reopened, because the payslips have been given to employees. Payslip PDFs are not produced in the app; print them from the web console.*

September 2026
PAYROLL RUN

How to finish this payroll run

- Generate payroll runs only after you have entered all attendance and salary. You can generate again until it is paid.
- Check the payslips. If wage components don't match the employee's monthly wage, the run cannot be confirmed.
- Confirm the run by clicking the 'Confirm' button.
- Mark paid when the money has been paid. This cannot be undone.
- Printing PDFs and printing is optional.

Period	1 Sep 2026 - 30 Sep 2026
Pay date	30 Sep 2026
Employees	1
Gross earnings	\$ 00
Deductions	\$ 00
Net pay	0.00
Payslips	0

Generate again **Confirm**

Printing payroll PDFs is optional.

A draft run — the totals, the Payslips row, Generate again and Confirm run

September 2026
PAYROLL RUN

How to finish this payroll run

- Generate payroll runs only after you have entered all attendance and salary. You can generate again until it is paid.
- Check the payslips. If wage components don't match the employee's monthly wage, the run cannot be confirmed.
- Confirm the run by clicking the 'Confirm' button.
- Mark paid when the money has been paid. This cannot be undone.
- Printing PDFs and printing is optional.

Period	1 Sep 2026 - 30 Sep 2026
Pay date	30 Sep 2026
Employees	1
Gross earnings	\$ 00
Deductions	\$ 00
Net pay	0.00
Payslips	0

Mark paid **Confirm**

Printing payroll PDFs is optional.

A confirmed run offering Mark paid and Back to draft

Step 36 Read a Payslip

Tap **Payslips** on a run for that month's payslips, or **Payslips** on the menu for every payslip in every run. Each row shows the employee, department, paid days and net pay, with a **Mismatch** chip where the earnings disagree with the Monthly Wage.

Tap a payslip for the full breakdown. It is read-only; to change it, generate the run again.

Section	What it shows
Earnings	Every earning line, then Gross earnings
Deductions	Every deduction line, then Total deductions
NET PAY	The amount paid, in figures and in words
Attendance	Working days, Present, Half days, Absent, Paid leave, Unpaid leave, Loss of pay days and Paid days , plus Comp off when there is any
Leave balance	Opening, Taken and Closing for the month

A payslip — Earnings, Deductions, NET PAY and the start of Attendance

Step 37 Generate a Month's Report

Tap **Generate Report (A month, per employee)**.

Field	What it controls
Month and Year	The month to report on
Company	Which company
Department	One department, or All departments
Employees	All employees or Selected employees
Which employees	The people to include, when Selected employees is chosen

Picking employees by name ignores the department filter. **Selected employees** with nobody picked gives **Pick at least one employee, or switch to All**.

Tap **Generate**. It recalculates the whole month for everyone in scope, so it takes a moment. You will see **Report generated.**, the report opens, and it is saved under **Past Reports**.

TIP PDF and Excel exports of the report are made from the web console, not in the app.

Generate Report — Period, Scope and the Generate button

Step 38 Read and Recalculate a Report

The report opens on **Grand totals: Period, Wage, Leave deduction, Total deduction** and **Final amount**, with a chip counting the employees.

Under **PER EMPLOYEE**, each row shows present over working days — for example **0/26 days** — then any late, unpaid and comp-off days, the final amount, and the deduction in red.

Tap an employee for their day-by-day lines. Each card is one line the report captured: a day, a late record or a leave, with empty values left out.

Recalculate refreshes the figures from current attendance; you will see **Report recalculated**.

One employee's day-by-day lines

Step 39 Open a Past Report

Tap **Past Reports (What was generated before)**. Each row is one saved report, with its month, department and company, and its final amount. Tap one to open it, and **Recalculate** to bring it up to date. An empty list says **No reports yet**.

Past Reports before any report has been generated

QUICK REFERENCE

Where Things Live

To do this	Go here
See who is missing today	Config → Absent Today
See every late check-in	Config → Late Records
See how each day was graded	Config → Day Status
Rank late days for a month	Config → Monthly Summary → Generate
Approve or reject leave	Config → All Leave Requests
Decide a leave cancellation	All Leave Requests → Cancellation
See what leave was granted	Config → Approved Leaves Report
Add a comp-off credit by hand	Compensatory Off → Add a credit

To do this	Go here
See anyone's leave balance	Config → Leave Balances
Change paid days or comp-off expiry	Config → Leave Policy
Approve or reject work from home	Config → All WFH Requests
Change office hours or grace	Office Hours & Working Days → tap a card
Switch on automatic Absent	Office Hours & Working Days → Late window ends
Add a public holiday	Public Holidays → Add a holiday
Auto-approve waiting requests	Config → Auto-Approval
Choose which employee details are kept	Config → Field Settings
Change the pay structure	Config → Salary Components
Run the month's payroll	Payroll Runs → New payroll run
Report on a month	Config → Generate Report

Who Can Do What

Task	Employee	HR	Admin
See the Config tab	No	No — gets the HR tab	Yes
See who is absent today	No	Yes, on the HR tab	Yes
Approve or reject leave	No	Yes	Yes
Decide a leave cancellation	No	Yes	Yes
Approve or reject work from home	No	Yes	Yes
Late Records, Day Status, Monthly Summary	No	No	Yes
Comp-off credits and leave balances	No	No	Yes
Leave Policy and Auto-Approval	No	No	Yes

Task	Employee	HR	Admin
Office hours, ladder and holidays	No	No	Yes
Field settings, salary components, statutory IDs	No	No	Yes
Payroll runs and reports	No	No	Yes

An administrator sees each section only when their login carries the right behind it; a missing section is a missing right, not a fault.

Things to Remember

- **Being late costs nothing.** A **Half Day** is the only pay cut, an **Absent** day is simply not earned, and days off and holidays are always paid.
- **The ladder ships switched off.** Until you set **Late window ends**, nobody is ever stamped Absent.
- **Holidays raise the daily rate.** A counted holiday leaves the working-day count the monthly wage is divided by; removing one lowers it.
- **New rule sets are made on the web console.** The app edits the office-hours rules that already exist.
- **Saving the rules re-grades three months.** Old records follow the new rules.
- **Policy changes apply from now on.** Leave already decided keeps its paid and unpaid split.
- **Paid leave does not carry forward.** Comp off can, up to the cap you set.
- **A wait of zero switches auto-approval off**, whatever the switch says.
- **Earnings must match the Monthly Wage**, or the payroll run cannot be confirmed.
- **Mark paid is final.** A paid run can never be reopened.
- **Cancelling approved leave stops at payroll.** It is refused once that month's run is confirmed or paid.
- **Payslip PDFs and report exports come from the web console**, not the app.
- **My details never shows salary, bank or statutory details**, whatever Field Settings says.

Set the rules once, clear the red badges every morning, and close each month's payroll. Everything else in this guide supports those three.
