

ATTENDANCE SUITE

Late Tracking · Leave · Work From Home · Payroll · Reports

User Manual | 369ai

What this does

Attendance Suite takes care of everything that happens around a check-in. When someone checks in, it works out what kind of day it was: on time, late, a half day, on leave, absent or a day off. We call that the **Day Status**. It lets people ask for **leave** or to **work from home**, and it tells everyone up front whether a leave will be paid. People who work on a Sunday or a holiday get a day back later, called a **compensatory off**. At the end of the month, all of this feeds the **payslips** and the **monthly report**, so pay always matches attendance.

HR sets the rules once: office hours, holidays, how much paid leave people get, and who approves what. After that the module runs on its own. One idea runs through all of it: **coming in late costs nothing, a half day costs half a day's pay, and an absent day is simply not paid**. Sundays and public holidays are always paid.

BEFORE YOU START: Setup is done once in Odoo by an **HR Manager**, and a **Settings administrator** handles the Employee Details screens. Make sure each employee has a **Monthly Wage** on their employee form, and that your company has a **Leave Policy**. Without a Leave Policy, every leave counts as unpaid. Employees who only check in and ask for leave don't need to set up anything.

How the manual is arranged

The manual follows the way the module is used. **Part 1 – Setting Up** is the one-time work: office hours, holidays, leave rules, approvals and employee details. **Part 2 – Everyday Use** is the day-to-day work: check-ins, late arrivals, daily status, leave, compensatory off and work from home. **Part 3 – Payroll, Reports & Access** is the month-end work, and who is allowed to see what. At the end you'll find status tables, a month-end checklist, quick tips and a "what to do if" table.

Every section starts with a line in *italics* that says in plain words what the screen is for. The dashed boxes marked **Example** walk through a real case with numbers.

Key words used in this manual

Word	What it means in plain terms
Working day	A normal workday: one of the ticked weekdays that isn't a public holiday. Only working days can be late, absent or counted as leave.
Day off	A weekly off, such as Sunday, or a public holiday. Nobody is ever absent on a day off, and it is always paid.
Daily rate	One day's pay: the Monthly Wage divided by the number of working days that month. Every deduction is "so many days × the daily rate".
Grace minutes	A few minutes of allowance. Arrive within them and you are still on time.
Late window	A cut-off hour. After it, nobody is "late" any more, and anyone who hasn't come in is marked absent.
Day status	The one-word label each person gets for each day: Present, Late, Half Day, Leave, Absent or Day Off.
Half day	Coming in very late, or leaving very early. It is the only status that cuts pay, by half a day.
Not earned	How an absent day is handled. It isn't subtracted as a penalty; it just isn't counted among the days paid.
Paid leave allowance	How many paid leave days a person gets per year and per month. Leave is paid only while both still have room.
Loss of Pay (LOP)	Days that are not paid: unpaid leave, absent days, and half of each half day.
Compensatory off	A day off given back to someone who worked on a Sunday or a holiday. It is kept separate from paid leave.
"I am working today"	A button in the app for days off. Tapping it lets the person check in, and starts their compensatory off.
Office timezone	The office's clock. All check-in times on these screens are shown in office time, wherever the person is.
Auto-approval	If nobody answers a request within a set time, the system approves it.

A day in the life

This short story shows how the pieces fit together. It uses a 9:30 start with 15 grace minutes, a late window ending at 11:00, and a Monthly Wage of 26,000 in a month with 26 working days, so one day's pay is 1,000.

1. **Monday.** Priya checks in from the app at 9:50. That's after 9:45, so the day is **Late (20 min)**. The app asks why, and Priya types "bus was late". Being late costs nothing.
2. **Tuesday.** Priya doesn't come in and hasn't asked for leave. At 11:00 the late window closes, and within half an hour Priya is marked **Absent**. HR sees the name in **Absent Today**. That day won't be paid: 1,000 less this month.
3. **Wednesday.** Priya asks for two days of leave next week. Before sending, the app shows that 1 day is paid and 1 day is unpaid, because this month's paid day is already used. HR approves it. The unpaid day will cost 1,000.
4. **Sunday.** There's a stock count, so Priya taps **I am working today**, checks in at 9:00 and out at 16:00. That earns **1 compensatory off** day, to take any time before it expires.

5. **Month end.** HR runs payroll. Priya's payslip shows the absent day and the unpaid leave day as Loss of Pay: 2 days, 2,000. The late Monday and the Sunday cost nothing.

PART 1 — SETTING UP

Done in Odoo by an HR Manager, once, and again only when a rule changes. If your office hours, holidays and leave policy are already in place, skip to Part 2.

1 Where everything lives

Everything is inside the Attendances app. Here is what each menu is for.

Open **Attendances** from the Odoo main menu. The module adds these menus:

- **Attendance Status** — see who was late, what each day was, who is absent today, and a monthly lateness count.
 - **Configuration** → **Office Hours & Working Days** and **Public Holidays** — the rules for a normal workday.
- **Devices** — which phone belongs to which employee.
- **Leave Requests** — ask for leave, approve it, and see balances and compensatory offs.
 - **Configuration** → **Leave Policy** and **Auto-Approval** — how much paid leave people get, and automatic approval.
- **Work From Home** — ask for and approve work-from-home days.
- **Employee Details** — which extra details you record about staff, salary parts and ID numbers.
- **Payroll** — monthly payroll runs and payslips.
- **Employee Report** — the monthly attendance and pay report, with PDF and Excel.
- **Help** — user guides like this one. They are managed under **Configuration** → **Help Documents**.

Every screen opens with a yellow **How to use** box that explains it in a few steps. What a person sees depends on their role; see **Who can do what** in Part 3.

The Attendances app with the Leave Requests menu open.

2 Office hours and working days

Tell the system when the working day starts and ends, and which days people work. Everything else is judged against this.

Open **Attendance Status** → **Configuration** → **Office Hours & Working Days**. You need one record for the company. Fill in:

- **Late Tracking** — the main switch. Turn it off and check-ins are still recorded, but nobody is ever marked late.

- **Require Late Reason** — when someone is late, they must say why. In the app, a box pops up right after a late check-in.
- **Company, Department and Office Timezone** — who these rules are for, and which clock to use. Leave Department empty for the whole company.
- **Grace Minutes** — how many minutes after the start time still count as on time.
- **Office Start and Office End** — the working day, for example 09:30 to 18:30.
- **Daily Paid Hours** — filled in for you as End minus Start. If lunch isn't paid, lower it, for example to 8 instead of 9.
- **Working Days** — tick the days people work. Unticked days are weekly offs: nobody is ever absent then, and they are always paid.

The **Day Status Ladder** settings handle the in-between cases. Each one is switched off while it is 0.

Setting	What it does, in plain words
Late Window Ends	The cut-off hour. Anyone who hasn't checked in by then is marked Absent . Anyone who arrives after it is simply Present , with the arrival time shown so it's still visible.
Half Day After	Arrive after this hour and the day counts as a Half Day .
Half Day Below Ratio	Work less than this share of the Daily Paid Hours and the day becomes a Half Day . With 0.5, anyone who works under half their hours gets a half day. It is decided when they check out.
Day Off Needs 'I Am Working Today'	On a Sunday or holiday, the app won't let someone check in until they tap I am working today . This is how they earn a compensatory off.
KRA Workday Creates Attendance	Only if you use the KRA/KPI app. Starting the workday there checks the person in; ending it checks them out.

EXAMPLE: HOW DIFFERENT ARRIVALS ARE GRADED

Rules: 9:30 start, 15 grace minutes, 8 Daily Paid Hours, Late Window Ends 11:00, Half Day After 13:00, ratio 0.5.

What happened	Day status	Why
In at 9:40	Present	Within the 15 grace minutes.
In at 9:50	Late (20 min)	After 9:45. The minutes count from 9:30. Costs nothing.
In at 11:20	Present (11:20 AM)	After the late window, so no longer counted as late.
In at 13:30	Half Day	After 13:00. Half a day's pay is cut.
In 9:30, out 12:30	Half Day	3 hours is less than half of 8 hours.
Not in by 11:00	Absent	Marked within 30 minutes after 11:00.
Not in, leave approved	Leave	Paid or unpaid, as the leave says.

When more than one rule fits, the order is: Half Day first, then Late, then Present.

New Office Hours & Working Days 369ai (Company-wide) 1 / 1

How to set office hours and working days

1. Keep one record per company. Add another record with a Department to give that department different rules.
2. Set Office Start and End, Grace Minutes, and the day status thresholds, then tick the Working Days.
3. Unticked days and public holidays are never marked Absent and are always paid.
4. After any change, press Recompute Late Records so existing days follow the new rules.
5. Switch Late Tracking off to keep recording check-ins without marking anyone late.

Friday ☒

Saturday ☒

Sunday ☐

How a day is graded (office-local arrival time):

- In by **Office Start + Grace Minutes** → **Present**, nothing owed.
- Between that and **Late Window Ends** → **Late**. Recorded and reported, but **not charged**.
- After **Late Window Ends** → **Present** again, nothing owed. The start time is still shown in brackets so a late arrival stays visible.
- After **Half Day After** → **Half Day**, charged half a day.
- Worked less than **Half Day Below Ratio** of Daily Paid Hours → **Half Day**. Decided on check-out.
- Never checked in on a working day → **Absent**, stamped by the "stamp absentees" cron once the office passes Late Window Ends. An absent day costs a full day by **not being earned** in the monthly report, so its Deduction column reads 0.

A half day is the only deduction. Lateness costs nothing, and an absent day is handled by not being earned. Daily rate = **employee Monthly Wage ÷ working days that month**, so Sundays and public holidays are paid and can never be deducted. Set every threshold to **0** to switch the ladder off.

Office Hours & Working Days: hours, grace minutes, the day status ladder and working days.

Different hours for one department. Add a second record and pick the **Department**. For example, Sales can start at 10:00 while everyone else starts at 9:30. A department record **replaces** the company record completely for its people, so fill in every field, not just the ones that differ.

WATCH OUT: Late minutes are counted from the **start time**, not from the end of the grace period. With a 9:30 start and 15 grace minutes, 9:45 is on time, but 9:50 is **20 minutes late**, not 5.

TIP: When you save changes here, the last 3 months are re-checked under the new rules automatically. The **Recompute Late Records** button does the same whenever you want, for example after adding a holiday.

IMPORTANT: If there is no record at all, the ladder is off. Nobody is ever marked absent or given a half day until you create one.

3 Public holidays

List the days the whole company is off, so nobody is marked absent and everyone is paid.

Open **Attendance Status** → **Configuration** → **Public Holidays**. Add one row per holiday with a **Holiday Name** and a **Date**. You can type straight into the list, or use the calendar view.

- **Counts** — shows whether the holiday falls on a normal workday. Only then does it change the month's working days.
- **Company** — a holiday applies to the whole company. You can't set a holiday for one department.

EXAMPLE: WHY HOLIDAYS CHANGE THE DAILY RATE

March has 26 working days. With a 26,000 wage, one day's pay is 1,000. Add a holiday on a Wednesday and March has 25 working days, so one day's pay becomes 1,040. Everyone still gets 26,000 for a full month, but an absent day or a half day that month costs a little more. A holiday on a Sunday changes nothing, because Sunday was already off.

GOOD TO KNOW: Only one holiday is allowed per date. If two festivals fall on the same day, put both names in one row, for example "Onam / Guru Jayanthi".

4 Leave policy

Decide how many paid leave days people get, and what happens to leave beyond that.

Open **Leave Requests** → **Configuration** → **Leave Policy**. Keep one record per company.

Field	Starts at	What it means
Enable Paid Leave	On	Turn it off and every leave is unpaid.
Paid Leave Days Per Year	12	Paid leave days per calendar year.
Paid Leave Days Per Month	1	The most paid leave anyone can take in a single month.
Enable Unpaid Leave Deduction	On	Unpaid leave days are cut from pay at the daily rate. Off just records them.
Enable Compensatory Off	On	Working a Sunday or holiday earns a day back.
Comp Off Expires After (Days)	0	How long someone has to use a compensatory off. 0 means it never expires.
Carry Comp Off Forward	On	Unused compensatory offs move into the new year.
Max Comp Off Carried Forward	5	The most compensatory off days that move into the new year.
Email HR on Submission	Off	Sends an email to the Notification Recipients each time someone asks for leave.

EXAMPLE: THE YEARLY AND MONTHLY LIMITS TOGETHER

The policy gives 12 paid days a year and 1 per month. Priya has used 3 paid days this year, so 9 are left for the year. Priya hasn't taken any leave in June, so 1 is left for June. Priya asks for 2 days in June: **1 is paid, 1 is unpaid**. The monthly limit is what decides it. July brings 1 fresh paid day again.

How to set the leave policy

1. Keep one record per company.
2. Set the Paid Leave Days per year and per month. A request is paid while both have room; the rest is unpaid.
3. Unpaid days are deducted at the Monthly Wage divided by that month's working days. Untick the deduction to only record them.
4. For Compensatory Off, switch it on and set when credits expire (0 = never).
5. Changes apply to requests decided from now on.

UNPAID LEAVE / DEDUCTION SETTINGS

Enable Unpaid Leave Deduction ? ☒

How paid and unpaid leave are worked out

- Each employee gets the paid leave days set per year, and per month.
- Once an employee has used up their paid leave, further leave becomes **unpaid**.
- Unpaid leave deduction = **Employee Monthly Wage ÷ Working Days in Month**.
- Half day unpaid = half the daily rate.
- Changes apply to requests decided from now on.

Leave Policy: the paid allowance, compensatory off and the HR email.

IMPORTANT: Leave is paid only while **both** the yearly and the monthly allowance have room. Whatever is left over is unpaid. With no Leave Policy saved at all, every leave is unpaid.

GOOD TO KNOW: The allowance starts fresh each calendar year. Unused **paid** leave does not carry into the next year. Only compensatory offs carry forward.

5 Auto-approval

If a manager forgets to answer a request, the system can approve it for them after a while.

Open **Leave Requests** → **Configuration** → **Auto-Approval**. The same screen is also under Work From Home. Create one record for your company.

- **Auto-approve Leave Requests** and **Approve after** — how long a leave request can wait before it's approved automatically, in minutes, hours or days.
- The same two settings for **Work From Home Requests**. You can switch on one, the other, or both.

EXAMPLE

Leave auto-approval is set to 24 hours. Priya asks for leave on Monday at 10:00, and nobody opens it. Around 10:00 on Tuesday it becomes **Approved**, with **OdooBot** shown as the approver and **Auto** ticked. If the manager rejects it on Monday afternoon, auto-approval never happens.

GOOD TO KNOW: The system checks every 10 minutes, so approval can come up to 10 minutes after the wait. Auto-approval ships switched off. A wait of 0 also means off.

6 Devices

Keep a record of which phone belongs to which employee.

Open **Devices** and click an employee. Type the 10-digit **Device ID** shown on their phone and set a **PIN**, then save. **Device Name** and **Last Used** fill in by themselves.

- **One phone per person** — adding a second phone is refused. Replace the old one instead.
- **Active** — switch it off for a lost or replaced phone, instead of deleting it.

GOOD TO KNOW: Devices is a record of who owns which phone. In the current version, it doesn't stop anyone checking in from another phone.

7 Employee details

Choose which extra details you keep about staff, how salaries are split, and which ID numbers you record.

The **Employee Details** menu is for Settings administrators. Everything here starts **switched off**, so nothing new appears on the employee form until you turn it on.

- **Field Settings** — which details you record. Start with the **Everyone** record and switch on sections: Salary Breakup, Statutory Identifiers, Bank & Payment, Personal & Emergency, and Employment History. Add a **Per employee** record only for someone who needs something different.
- **Salary Components** — the parts of a salary, such as Basic or HRA. Eight ready-made ones start switched off: Basic, HRA, Conveyance, Medical, Special, PF, ESI and Professional Tax. Each is an **Earning** or a **Deduction**, and is a fixed amount or a percentage. Drag them into the order they should print on the payslip.
- **Statutory ID Types** — the official ID numbers you keep. Seven ready-made ones start switched off: PAN, Aadhaar, UAN, PF Number, ESIC Number, Passport Number and Driving Licence. **Required** means everyone must have one. **Confidential** hides it from other staff. A **Validation Pattern** can check the number is typed in the right format.

EXAMPLE: SPLITTING A 30,000 SALARY

Component	Type	How it's worked out
Basic	Earning	Fixed 15,000
HRA	Earning	40% of Basic = 6,000
Special	Earning	Fixed 9,000
PF	Deduction	12% of Basic = 1,800

The earnings add up to 30,000, which matches the Monthly Wage, so payroll can go ahead. The 1,800 PF is taken off to give the net pay.

IMPORTANT: Employees never see salary. They can fill in their own personal, ID and qualification details from **My Profile**, but only the fields you switched on here.

8 The employee form

A few things the module adds to each employee in the Employees app.

- **Monthly Wage** — on the **Payroll** tab, under **Attendance Deductions**. Every deduction and payslip starts from this number. If it's 0, nothing is ever deducted.
- **Salary breakup** — the salary components for this person. The earnings must add up to the Monthly Wage. **Copy the component gross onto Monthly Wage** makes them match in one click.
- **Comp Off** — a button at the top that opens this person's compensatory offs.
- **Devices** tab — their registered phone and PIN.
- **Employment** and **Detail Fields** tabs — confirmation date, notice period, past jobs, qualifications and other details you switched on in Field Settings.

9 Help documents

Manage the guides people see under the Help menu.

Open **Attendances** → **Configuration** → **Help Documents**. Each record is one card, with a title, a short description and an icon. Upload a PDF, write the guide as HTML, or both. **Open guide** shows the HTML, and **Open in PDF doc** opens the PDF. Untick **Active** to hide a card.

PART 2 — EVERYDAY USE

The screens HR and managers use every day. Employees mostly use the 369 Attendance app; whatever they do there shows up on these screens.

1 Checking in and out

How a check-in gets into the system, and the few rules it has to follow.

A check-in can come from the **369 Attendance app**, from the Odoo **kiosk**, or be typed in by HR on the attendance form. All of them create the same attendance record, and the day is graded the moment it arrives.

- **Once a day** — after someone checks out, they can't check in again the same day. They must wait until tomorrow.
- **Days off** — on a Sunday or holiday, the app first asks them to tap **I am working today**. Then check-in works as normal.
- **Late reason** — after a late check-in, the app asks for a reason. HR entering a late check-in in Odoo must type one before saving.
- **Work from home** — on a day with approved work from home, the check-in is marked **Work From Home** by itself. There's no special button.
- **Times** — check-in times on every screen are shown in office time, so a person working from another city still looks right.

WATCH OUT: If HR checks someone out by mistake, they cannot check in again that day. Check the name before you press **Check Out Now**.

2 Late Records

A list of everyone who came in late, how late they were, and why.

Open **Attendance Status** → **Late Records**. Each row is one late check-in, with the time in office time, the **Late Time**, the **Late Reason** and the **Work Location**.

- **Filters** — **Late Only**, **On Time**, **Has Reason** and **Missing Reason**. Group by Employee or Month to see who is often late.
- **Enter Late Reason** — on the form, opens a small box to type or change the reason.
- **Check Out Now** — checks out someone who forgot to. It asks you to confirm first.
- **Late Attendance Report** — tick the rows you want, then **Print** → **Late Attendance Report**. You get a PDF with the expected time, how late, and the reason.

GOOD TO KNOW: Being late is recorded and shows in reports, but it never cuts pay. Only a half day does.

3 Day Status

One line per person per day, saying what kind of day it was.

Open **Attendance Status** → **Day Status**. It shows this month by default. The colours make problems easy to spot:

Status	Colour	What it means	Effect on pay
Present	Plain	On time, or arrived after the late window.	Full day paid
Late	Blue	After the grace minutes but before the late window.	Full day paid
Half Day	Amber	Came in too late, or worked too few hours.	Half a day cut
Leave	Green	Didn't come in, but had approved leave.	As the leave says
Absent	Red	A workday with no check-in and no leave.	Not paid
Day Off	Grey	Sunday or a public holiday. "Day Off - Worked" if they came in.	Always paid

Attendances Overview Management Kiosk Mode Reporting Attendance Status Devices Leave Requests Work From Home Employee Details Payroll + 369ai

New Day Status Q This Month X Search...

How to use Day Status

1. There is one row per employee per day, saying what the day was: Present, Late, Half Day, Leave, Absent or Day Off.
2. Rows appear when someone checks in. Absent rows are added automatically once the office passes Late Window Ends.
3. Filter by Absent, Half Day, Leave, Late or Has Deduction. This Month is on by default.
4. A Half Day is the only status that costs money. An absent day is simply not earned, and being late is free.
5. After changing the office hours or thresholds, open a row and press Recompute.

Date	Employee	Status	Deduction
 No day status yet Rows appear as people check in, and the absent cron stamps anyone who has not, once the office passes the configured "Late Window Ends" hour. Leave that hour at 0 and this stays empty.			

Day Status, with its How to use box. Rows appear here as people check in.

Use the filters **Absent**, **Half Day**, **Leave**, **Late**, **Day Off** and **Has Deduction** to narrow the list. If you fix someone's attendance or leave, open their day and press **Recompute** to grade it again.

4 Absent Today

Who should be at work today but hasn't turned up.

Open **Attendance Status** → **Absent Today**. It lists everyone expected today who hasn't checked in. People on approved leave or an approved work-from-home day are left out.

- **When it fills up** — the system checks every 30 minutes, starting once the **Late Window Ends** hour has passed. Early in the morning the list is empty; that's normal.
- **If they turn up later** — once they check in, they drop off the list by themselves.
- **Marked absent by mistake?** — approve their leave, or add their attendance, and the day is corrected.

WATCH OUT: If **Late Window Ends** is left at 0, this list stays empty all day. Payroll still treats a past workday with no check-in and no leave as absent.

5 Monthly Summary

A quick count of how often each person was late in a month.

Open **Attendance Status** → **Monthly Summary**. Pick the **Month** and **Year**. You can pick a **Department** or some **Employees**, or leave both empty for everyone. Press **Generate Summary**. You get one line per person with **Total Late Days** and **Total Late Time**.

- Only the first check-in of each day counts.
- Arriving after the late window is not counted as late.
- Each run replaces the last one, so you can run it as often as you like.

TIP: Only HR Managers can create the summary. For anything to do with pay, use **Employee Report** → **Generate Report** instead.

6 Asking for leave

How someone asks for time off, and how the system decides which days are paid.

Most people ask from the app, which shows how many days will be paid before they send it. In Odoo, open **Leave Requests** → **My Leave Requests** and press **New**:

- **Leave Type** — Sick, Casual, Annual, Personal, Emergency, Compensatory Off, or Other. All types except Compensatory Off come out of the same paid allowance.
- **From Date** and **To Date** — for one day, leave To Date empty. Tick **Half Day** for half of the first day.
- **Reason** — required.

A new leave request. The bar on the right shows where it is: Draft, Pending Approval, Approved.

Press **Submit for Approval**. The request becomes **Pending Approval**, and the form shows:

Figure	What it means
Number of Days	Only workdays are counted. A Sunday or holiday in the middle of the leave is free.
Paid Days	As many days as the yearly and monthly allowance both still allow.
Unpaid Days	The rest. These are Loss of Pay.
Deduction Amount	Unpaid days × one day's pay in that month.

EXAMPLE: A LEAVE OVER A WEEKEND

Priya asks for Friday to Tuesday. Sunday is a weekly off and Monday is a public holiday. Only **3 days** are counted: Friday, Saturday and Tuesday. With 1 paid day left this month, 1 day is paid and 2 are unpaid. With a daily rate of 1,000, the deduction is 2,000.

If **Email HR on Submission** is on in the Leave Policy, HR gets an email for each new request. It shows the employee, department, leave type, dates, paid and unpaid days, and the reason, with a **Review and approve** button.

WATCH OUT: A request is refused if its dates overlap another request that isn't rejected or cancelled. That includes an unsent draft. It is also refused if every day in it is already a day off.

7 Approving leave

Where managers say yes or no, and handle requests to cancel approved leave.

Open **Leave Requests** → **All Leave Requests**. It opens on the **Pending** filter, so you only see requests waiting for you. Open one, check the dates, the reason and how many days are paid, then press **Approve** or **Reject**. Approved leave shows as Leave in Day Status straight away.

Cancelling approved leave. Once leave is approved, the employee can't just cancel it. From the app they send a **cancellation request** with a reason, and the leave stays approved until HR decides. Pick the **Cancellation Requested** filter to find these, open one, and choose:

- **Approve Cancellation** — the leave is cancelled and the days go back to their balance.
- **Keep Leave** — the leave stays. Type why; the employee sees your reason in the app.
- **Cancel Leave** — a manager can also cancel approved leave directly, without a request.

WATCH OUT: Leave can't be cancelled once payroll for those dates is confirmed or paid. Put the payroll run back to draft first. Also, cancelling leave in the past turns those days into **Absent** if the person didn't check in.

TIP: To give a reason when rejecting, reject from the app. The Odoo **Reject** button rejects without asking for one.

8 Approved Leaves Report

Every leave that has been approved, in one place.

Open **Leave Requests** → **Approved Leaves Report**. It is grouped by employee. Use the date filters, or group by month, to see who was off when. The paid and unpaid days here are exactly what payroll uses. Requests still waiting for a decision are in All Leave Requests, not here.

9 Compensatory Off

A day off given back to people who worked on a Sunday or a holiday.

Open **Leave Requests** → **Compensatory Off** to see every credit. A day counts as a full day if the person worked at least $\text{Daily Paid Hours} \times \text{Half Day Below Ratio}$. If the ratio is 0, it's half the Daily Paid Hours instead. When they use it, the oldest credit is used first, so nothing expires by accident.

EXAMPLE

Daily Paid Hours is 8 and the ratio is 0.5, so a full day needs 4 hours. Priya works Sunday 5 January from 9:00 to 15:00, which is 6 hours: that earns **1 day**. Arun works the same Sunday for 3 hours, which earns **½ day**. With credits set to expire after 60 days, Priya's credit must be used by 6 March. Priya asks for Compensatory Off on 20 January, and once it's approved the credit shows as used.

On a credit, HR can press:

- **Grant** — when someone said they were working but never checked out. Set **Days Earned** to ½ first if it was a short day.
- **Cancel Credit** — for a credit that shouldn't have been given. Not possible once leave has used it.
- **Restore** — brings back a cancelled or expired credit, with a fresh expiry date.

GOOD TO KNOW: Look at **Days Left** rather than the status. On 1 January, unused credits from last year move over, newest first, up to the limit in the Leave Policy. The rest expire. When a credit expires, only the unused part is lost.

10 Leave Balances

How much paid leave and compensatory off each person has left this year.

Open **Leave Requests** → **Leave Balances**. There is one row per employee:

- **Allowed**, **Leave Taken** and **Paid Leave Left** — their paid leave, from the Leave Policy.
- **Comp Off Earned**, **Comp Off Used** and **Comp Off Left** — kept separately. Taking a compensatory off doesn't touch their paid leave.
- **Credits** — opens that person's compensatory offs.

These numbers are worked out fresh each time you open the screen, so you can't sort or filter by them.

11 Work From Home

Ask for a day at home, and have that day's check-in recorded as working from home.

Employees ask from the app, or in Odoo under **Work From Home** → **My WFH Requests**: press **New**, pick the **WFH Date**, give a reason and press **Submit for Approval**. Managers open **All WFH Requests**, which opens on the **Pending** filter, and press **Approve**.

- **No special check-in** — on the approved day, the person checks in as usual and it's marked Work From Home. The request then shows **Checked In** and later **Checked Out**.
- **Same rules** — a work-from-home day is graded like an office day. Starting late is Late, and not checking in is Absent.
- **Rejecting** — done from the app, where the manager types a reason. The Odoo form has **Approve** and **Cancel** only.

12 Help

Open the user guides from inside Odoo.

The **Help** menu opens **Help & User Guide**, with a card for each guide. Press **Open guide** to read it in a new tab. From there, **Open in PDF doc** gives the printable version. This manual is one of the cards.

PART 3 — PAYROLL, REPORTS & ACCESS

Month-end work for HR Managers. Payroll and the monthly report both read the same day statuses and leave, so they always agree with the screens in Part 2.

1 How pay is worked out

The few simple rules that turn a month of attendance into a salary.

Pay is built up from days. One day's pay is the Monthly Wage divided by that month's working days. Present days, late days, paid leave, Sundays and holidays are all paid in full. Three things reduce pay: an **absent day** (not paid), an **unpaid leave day** (not paid), and a **half day** (half paid).

EXAMPLE: PRIYA'S MONTH

Monthly Wage 26,000. The month has 25 working days after one holiday, so one day's pay is 1,040.

What happened	Days	Effect on pay
Present, including 3 late days	20	Paid in full. Late costs nothing.
Half day	1	520 cut (half a day)
Paid leave	1	Paid in full
Unpaid leave	2	2,080 not paid
Absent	1	1,040 not paid
Sundays and the holiday	—	Always paid

Loss of Pay is 3.5 days (1 absent + ½ half day + 2 unpaid), which is 3,640. Priya is paid **26,000 – 3,640 = 22,360**, before deductions like PF.

2 Payroll Runs

Create the month's payslips for everyone in a few clicks.

Open **Payroll** → **Payroll Runs**, press **New**, choose the **Month** and **Year**, and save. There is one run per company per month.

Generate Payslips makes one for each employee

Fix any salary mismatch, then generate again

Once the salaries have been paid out

- **Generate Payslips** — you can press it again as often as you like while the run is Draft. It rebuilds every payslip from the latest attendance.
- **Confirm** — not allowed while any payslip's salary parts don't add up to the Monthly Wage. A yellow box tells you which ones.
- **Back to Draft** — reopens a confirmed run to fix something. A paid run can't be reopened.
- **Print All Payslips** — one PDF with every payslip in the run.

IMPORTANT: After you confirm a run, no leave in that month can be cancelled. Put the run back to draft first.

3 Payslips

One employee's pay for one month, with the days behind it.

Open **Payroll** → **Payslips**. Payslips are made by the payroll run; you don't type them in. Each one shows every earning and deduction, and the days behind the pay. Press **Print Payslip** for the PDF.

On the payslip	What it means
Working days	The month's workdays, not counting Sundays and holidays.
LOP days	Absent days + half of each half day + unpaid leave days. A compensatory off is never LOP.
Paid days	Working days minus LOP days.
Net pay	Earnings minus deductions minus the LOP amount, rounded and also written in words.
Leave tab	Paid leave at the start of the month, taken this month, and left at the end.

The **With Loss of Pay** and **Wage Mismatch** filters show the payslips worth a second look.

4 Generate Report

A monthly attendance and pay report for everyone, ready to download.

Open **Employee Report** → **Generate Report**. Pick the **Month**, **Year** and **Company**, then **All Employees** or **Selected Employees**. You can also narrow it to one **Department**. Press **Generate Report**.

Employee Monthly Report

How to generate a report

1. Pick the month, year and company, then all employees or selected ones. A department is optional.
2. Press Generate Report. It opens with a summary per employee and a day-by-day tab.
3. Inside the report, Refresh recalculates from current data, and PDF Report and Excel Export download it.
4. Every report is kept under Past Reports.

PERIOD

Generate Report

Cancel

Generate Report: choose the period, the company and the employees.

The report has two tabs:

- **Employee Summary** — one line per person: working days, present days, late days and time, paid and unpaid leave, compensatory off, deductions and the **Final Amount**. The buttons on each line show that person's days, late arrivals or leave.
- **Day-wise Details** — every day for every person, with times, late minutes and leave.

At the top, **Refresh** recalculates from the latest data. **PDF Report** and **Excel Export** download it. The Excel file has a summary sheet and a detailed sheet.

WATCH OUT: Refresh uses today's Leave Policy. If you've changed the policy since that month, an old report can change when you refresh it.

5 Past Reports

Every report you have made, kept for later.

Open **Employee Report** → **Past Reports**. Each row is one saved report, with its dates, total deductions and final amount. Open one to look at it again, or press Refresh inside it to update it. For a new month, use Generate Report. Only HR can see saved reports; for an employee this list is empty.

6 What happens automatically

Jobs the system runs by itself, and the only email it sends.

Job	How often	What it does
Mark absentees	Every 30 minutes	After the late window, marks anyone who hasn't checked in as Absent, or as Leave if they have approved leave.
Auto-approve requests	Every 10 minutes	Approves leave and work-from-home requests that waited longer than the Auto-Approval time.
Expire compensatory offs	Once a day	Expires overdue credits, clears "working today" declarations that never happened, and on 1 January carries credits into the new year.

The only email is the **new leave request** alert to HR, if it is switched on in the Leave Policy. Approvals, rejections and cancellations aren't emailed; employees see the result in the app.

7 Who can do what

Each role can do everything in the rows above it, plus its own row.

Roles are set on each user in **Settings** → **Users**.

Role	What they can do
Employee	Check in, ask for leave and work from home, and see their own requests. Can view Late Records, Day Status, Devices, Approved Leaves Report, Compensatory Off, Employee Report and Help. Rule screens are view-only.
HR Officer	Adds Leave Balances, and can see everyone's day status and compensatory offs.
Leave Manager	Adds All Leave Requests with Approve, Reject, Approve Cancellation, Keep Leave and Cancel Leave, plus Leave Policy and Auto-Approval.
WFH Manager	Adds All WFH Requests with Approve, plus Auto-Approval for work from home. Separate from Leave Manager.
HR Manager	Adds Absent Today, Monthly Summary and Payroll, and can change office hours, holidays and devices.
Settings Administrator	Adds Employee Details (Field Settings, Salary Components, Statutory ID Types) and every manager action.

Status reference — leave requests

State	What it means	What you can do
Draft	Saved in Odoo, but not sent yet.	Submit for Approval, or Cancel.
Pending Approval	Waiting for a manager, or for auto-approval.	Approve, Reject, or Cancel.
Approved	Granted. Shows as Leave in Day Status.	Only cancelled through HR.
Rejected	Turned down.	Reset to Draft, change it, and send again.

State	What it means	What you can do
Cancelled	Withdrawn. The days are back in the balance.	Reset to Draft.

Status reference — compensatory off

State	What it means	What you can do
Declared	They tapped "I am working today" but haven't checked out yet.	Wait for check-out, or press Grant.
Available	Earned and ready to use. Check Days Left.	Use it with a Compensatory Off leave.
Consumed	Fully used by approved leave.	Comes back if that leave is cancelled.
Expired	Not used in time, or over the year-end limit.	Restore.
Cancelled	Taken back by HR.	Restore.

Status reference — work from home and payroll

State	What it means	What you can do
WFH: Pending	Waiting for a WFH Manager.	Approve in Odoo, or reject in the app.
WFH: Approved	They may work from home that day.	Check in as usual; Cancel if plans change.
WFH: Checked In / Out	The day was used.	—
Payroll: Draft	Payslips can still be rebuilt.	Confirm.
Payroll: Confirmed	Figures locked. Leave in that month can't be cancelled.	Mark Paid, or Back to Draft.
Payroll: Paid	Done.	Can't be undone.

Month-end checklist

1. Open **All Leave Requests** and decide every pending request and cancellation request for the month.
2. Open **Day Status** with the **Absent** filter. Anyone wrongly absent needs their leave approved or attendance added.
3. Check **Compensatory Off** for **Declared** credits, and press Grant where the check-out was missed.
4. Make sure every employee has a **Monthly Wage**, and that their salary parts add up to it.
5. Create the **Payroll Run**, press Generate Payslips, fix any mismatch, then Confirm.
6. Run **Generate Report** for the month and download the PDF or Excel for your records.
7. Once salaries are paid, press **Mark Paid** and print the payslips.

Quick tips

- Late costs nothing. A half day costs half a day. An absent day just isn't paid.
- Late minutes count from the start time, not from the end of the grace minutes.
- Leave is paid only while both the yearly and the monthly allowance have room.
- Sundays and holidays inside a leave are free.
- Save a Leave Policy before anyone asks for leave; without one, all leave is unpaid.
- Employees can't cancel approved leave themselves. HR decides.
- Set Late Window Ends, or nobody is ever marked absent during the day.
- Salary parts must add up to the Monthly Wage before payroll can be confirmed.
- A compensatory off is separate from paid leave, and the oldest one is used first.

If something goes wrong

What you see	What to do
Someone came in late but isn't in Late Records	Check Late Tracking is on in Office Hours & Working Days, for their company or their department. Someone arriving after the late window counts as Present, not Late.
Absent Today is always empty	Late Window Ends is 0, or that time hasn't come yet today. Set the hour in Office Hours & Working Days.
Nobody is ever marked half day	Half Day After and Half Day Below Ratio are both 0. Set at least one.
A leave came out unpaid	The yearly or the monthly allowance is used up, or no Leave Policy is saved. Check Leave Balances and the Leave Policy.
An employee can't cancel approved leave	That's on purpose. They send a cancellation request from the app, and HR chooses Approve Cancellation or Keep Leave.
Cancelling a leave says payroll is confirmed	Open that month's payroll run, press Back to Draft , then cancel the leave.
The payroll run won't confirm	A payslip's salary parts don't match the Monthly Wage. On the employee, press Copy the component gross onto Monthly Wage , then Generate Payslips again.
Check-in is refused on a Sunday or holiday	The employee must tap I am working today in the app first. That also earns their compensatory off.
Check-in is refused later the same day	They already checked out today. They can check in again tomorrow.
Monthly Summary gives an access error	Only HR Managers can create it. Ask one, or use Late Records with the Late Only filter.
A Compensatory Off leave is refused	Not enough credit left. Check Leave Balances. A Declared credit needs a check-out, or HR to press Grant .
Saving a late check-in asks for a reason	Require Late Reason is on. Press Enter Late Reason , or switch the setting off.

What you see	What to do
HR didn't get the leave email	Check Email HR on Submission and the recipients in the Leave Policy, and that Odoo's outgoing mail server works.
